Disclosure for Article 6 (Other Product)

Japan Equity Small Cap Absolute Value Strategy

Strategy:	Japan Equity Small Cap Absolute Value strategy
Investment Objective	Capital appreciation in the mid-to-long term
Investment Universe	Stocks listed on the Tokyo Stock Exchange (TSE), JASDAQ, and regional stock exchanges in Japan.
SFDR Category: Article 6	The strategy has neither a sustainable objective nor environmental or social characteristics.
UCITS Fund Name	DSBI Japan Equity Small Cap Absolute Value

Strategy overview:

Our Japan Equity Small Cap Absolute Value product aims to maximise total return. Its objective is capital appreciation in the medium-to-long term. Our strategy aims to outperform the market in the medium-to-long term by investing in financially stable small and micro-cap companies with sustainable growth potential that are undervalued. By adopting a Value biased active investment approach and focusing on extensive research, we are able to unearth companies with true earnings potential and exploit the opportunities that exist within the niche Japanese small cap market.

Sustainability Risk Integration and Limitations of Sustainability Data:

The investments underlying this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

However, the strategy systematically reviews environmental, social, and governance (“ESG”) factors alongside financial factors, treated holistically and managed from a risk-return perspective in the investment process as the Portfolio Manager considers that ESG issues can influence investment risk and return.

The Portfolio Managers take account of material sustainability risks into their investment decision-making processes in order to enhance their ability to manage risk more comprehensively and generate sustainable, long-term returns for investors. Further details on our policies on the integration of sustainability risk into our investment decision-making process can be found in the links provided below.

Sustainability risks mean an environmental, social, or governance event or condition that, if it occurs, could potentially or actually cause a material negative impact on the value of a Sub-Fund’s investment. Sustainability risks can either represent a risk of their own or have an impact on other risks and may contribute significantly to risks, such as market risks, operational risks, liquidity risks or counterparty risks.

Assessment of sustainability risks is complex and may be based on environmental, social, or governance data which is difficult to obtain and incomplete, estimated, out of date or otherwise materially inaccurate. Even when identified, there can be no guarantee that these data will be correctly assessed.

DISCLOSURE FOR ARTICLE 6 (OTHER PRODUCT)
JAPAN EQUITY SMALL CAP ABSOLUTE VALUE STRATEGY

Sustainability risks may have a more material impact on the value of the Sub-Fund's investments in the medium-to-long term. SMDAM recognises that the impact of the consideration of sustainability risks could be either positive or negative for the strategy's eventual performance. This impact is not quantifiable and will vary on a case by case basis; this is partly related to the known industry limitations of sustainability data.

The strategy and the fund do not apply a specific index as a reference index to attain environmental and social characteristics.

Derivatives:

The strategy may use derivatives for hedging and efficient portfolio management. The derivatives are currently not specifically aligned with the E/S characteristics as defined in the Regulation EU 2019/2088 ("SFDR") and Regulation (EU) 2020/852 ("Taxonomy Regulation").
